

**IILM  
UNIVERSITY**

**SUMMER INTERNSHIP PRESENTATION**

# **Design & Development of the Official Website of Lotus Academy**

---

**Student Name: HARSH CHOUDHARY**

**Enrollment No.: 2410030625**

**Program & Semester: BTech CSE 5th SEMESTER**

**Organisation: LOTUS ACADEMY**

# About the Organisation

**10+ Years**

In operation, founded  
2016

**Nursery -  
Class 5**

English medium, RBSE

**10 Teachers**

Dedicated core team

**20+ Years**

Principal's experience

Lotus Academy is an English-medium co-education school in Chittorgarh, Rajasthan, led by Principal Dimple Jat. The school runs an active co-curricular calendar — Independence Day, Republic Day, Diwali, Dussehra, Teacher's Day, Annual Function and Graduation Day — alongside its academic program, which gave this project a rich, real archive of events to design around.

# Objectives of the Internship

- 1 Design and develop a professional, mobile-responsive website from the ground up
- 2 Translate the school's existing crest and branding into a cohesive web design system
- 3 Organise the school's event photographs into a structured, browsable gallery
- 4 Build an interactive academic calendar that non-technical staff can maintain
- 5 Gain end-to-end experience in front-end development and stakeholder-driven iteration

# Tools & Technologies Used

## HTML5 / CSS3

Semantic structure, custom design system — no CSS framework

## JavaScript (ES6)

Nav, lightbox, filters, scroll-reveal, animated counters

## CSS Grid & Flexbox

Fully responsive, mobile-first layouts

## SVG clip-path

The crest-shaped shield photo frames used site-wide

## IntersectionObserver

Scroll animations and count-up statistics

## Git & GitHub

Version control and submission

# Website Architecture

*assets/ → css / js / images (branding · independence-day · republic-day · diwali · dussehra · annual-function · teachers-day · graduation · first-day · principal)*

The site is fully static (no backend required) so it can be hosted anywhere — Netlify, GitHub Pages, or standard shared hosting — at no ongoing cost to the school.

# Design System — Rooted in the School's Own Crest

## Shield clip-path frame

Every key photo (hero, Principal, About) is clipped into the exact shield shape from the logo

## Gold sunburst

A slow-rotating radial pattern behind the homepage hero, echoing the rays behind the logo's lotus

## Marigold “toran” divider

A gently swaying garland strip between sections, inspired by the school's own festival décor

## Colour palette

Royal blue, gold and lotus pink — lifted directly from the crest

# Home Page

- Hero with the crest-shaped photo frame and gold sunburst
- Animated statistic counters (years, teachers, experience)
- Celebration cards linking straight into the gallery
- Principal's quote block
- Fully mobile-responsive, tested at 390px width

# About & Principal Page

- The school's ten-year story
- A Principal profile card (crest-framed photo)
- A full first-person message from the Principal to students and parents
- Written directly from an interview with the Principal

# Photo Gallery

- Categorised, filterable albums by event
- Independence Day, Republic Day, Diwali, Dussehra, Annual Function, Teacher's Day, Graduation, First Day
- Each album tagged by year for easy expansion
- Click-to-zoom lightbox
- Placeholder cards for festivals not yet photographed

# Feature Highlight — Animated Academic Calendar

July 2026 – June 2027

## Colour-coded days

Sundays & vacations in red, exams in green, activity days in purple

## Season/festival theming

Each month's colours and tag change with the season or festival that falls in it

## Editable by non-coders

Holidays, exam dates and monthly activities live in one clearly commented data file

## Built-in monthly panels

A photo panel and a co-curricular activities panel for every month

# Challenges Faced & Solutions

**Shield-shaped photo frames across every page**

One reusable SVG clipPath, referenced by CSS clip-path everywhere

**No overlap or cut-off content on mobile**

Mobile-first Grid/Flexbox layout, tested at multiple breakpoints

**Calendar must be editable by non-coders**

All editable content isolated into one commented data file, separate from rendering logic

**Design didn't match the school's brand strongly enough**

Rebuilt the design system directly around the logo's shield, sunburst and scrollwork after review

# Future Scope

- Admissions enquiry form connected to a lightweight backend/database
- Form-based content management so staff can update the site without touching code
- Parent portal for homework, notices and fee status
- WhatsApp/SMS notifications for holidays and events, from the calendar's own data
- Hindi-language toggle for parents
- SEO & Google Business Profile integration for local discoverability
- Database-backed API for multi-admin editing and visitor analytics

# Conclusion

This internship gave complete, practical ownership of a real institutional website — from first design concept to a deployed, production-ready product actively used by Lotus Academy. It combined front-end engineering, brand-driven design, and iteration based on real stakeholder feedback, resulting in a site and academic calendar the school is genuinely using today.

# Thank You
